

## **Job brief**

We are looking for a Machine Learning (ML) Engineer to help us create artificial intelligence products.

Machine Learning Engineer's responsibilities include creating machine learning models and retraining systems. To do this job successfully, you need exceptional skills in statistics and programming. If you also have data science and software engineering knowledge, we'd like to meet you.

Your ultimate goal will be to shape and build efficient self-learning applications.

### **Responsibilities**

- Study and transform data science prototypes
- Design machine learning systems
- Research and implement appropriate ML algorithms and tools
- Develop machine learning applications according to requirements
- Select relevant datasets and data representation methods
- Run machine learning tests and experiments
- Perform statistical analysis and fine-tuning using test results
- Train and retrain systems when necessary
- Extend existing ML libraries and frameworks
- Keep abreast of developments in the field

### **Requirements and skills**

- Proven experience as a Machine Learning Engineer or similar role
- Understanding of data structures, data modeling, and software architecture
- Deep knowledge of math, probability, statistics, and algorithms
- Ability to write robust code in Python, Java, and R
- Familiarity with machine learning frameworks (like Keras or PyTorch) and libraries (like sci-kit-learn)
- Excellent communication skills
- Ability to work in a team
- Outstanding analytical and problem-solving skills
